

Case Study 2

The Client, a leading cosmetic Dentist specialising in Implants and cosmetic dentistry asked us to help design and build a high-end Surgery with a relaxing atmosphere for patients. Particularly important to this was to hide away the specialist equipment, but still leave it accessible. A private lab adjoining the surgery needed better storage and a more ergonomic working area

Project

To refit the surgery with bespoke storage units from the “Kabinets” range of dental cabinetry finished in Gloss Japanese pear. A bespoke side unit was created to house the equipment in pull out units with glass doors to hide the AV equipment but still enable the remotes to function. Finally it was decided to add colour change LED lighting at plinth level and daylight white Led under cabinet lighting. The upstands were cleverly lit with integrated LED lighting to give a low level bright white surface light for the clinician but enabling the room to stay calmer and more relaxing for the patient. All building works, Flooring, Electrics, Plumbing, Cabinetry, Corian work tops and feature lighting. Project Management by SSD Building Services.

Project Value £16,000

Project Length: 10 Days
